

RulesDBPackager Introduction

In this chapter, you will be introduced to the Model Packager and Texture Packager functions in RulesDBPackager. Model Packager packs the information of the digital model and its related information (such as the measurements, designer, vendor information...etc) into one single package file. Texture Packager packs the information of the mapping (such as the measurements, designer, vendor information...etc) into one single mapping package file.

Model Packager

Model Packager packs the information of the digital model and its related information (such as the measurements, designer, vendor information...etc) into one single package file.
